Characterization of cDNA encoding basic fibroblast growth factor
the marsupial Monodelphis domestica.";
DNA Cell Biol: 13:549-554(1994).
-I- FUNCTION: THE HEPARIN-BINDING GROWTH FACTORS ARE ANGIOGENIC AVARIETY OF CELL TYPES II
VITRO. THERE ARE POTENT MITOGENS FOR A VARIETY OF CELL TYPES II
VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND
CONCENTRATION OF THESE 2 GROWTH FACTORS.
-I- SUBUNIT: MONOWER.
-I- MISCELLANEOUS: THIS PROTEIN BINDS HEPARIN MORE STRONGLY THAN I
                                                                                                                                                                                                                                                        BINDING

J. Biol. Chem. 271:30263-30271 (1996).
-i- FUNCTION: THE HEPARIN-BINDING GROWTH FACTORS ARE ANGIOGENIC AGENTS IN VIVO AND ARE POTENT MITOGENS FOR A VARIETY OF CELL TYPES IN VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND CONCENTRATION OF THESE 2 GROWTH FACTORS.
-i- SUBUNIT: MONOMER.
-i- SIMILARITY: BELONGS TO THE HEPARIN-BINDING GROWTH FACTORS FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Heparin-binding growth factor 1 precursor (HBGF-1) (Acidic fibroblast growth factor) (AFGF).
